

# Daily Fuelling Framework

Week 3 -- Fuelling the Engine | The Roadman Method

*"Calories in versus calories out... this advice is so outdated. It's not just incomplete. It's actually making you fatter."*

-- Anthony Walsh -- Roadman Cycling Podcast

Built around the principle Anthony followed when he lost 7kg in 12 weeks while eating more food.

## Daily Fuelling Baseline

| Training Day Type       | Carb Target        | Protein Target | Key Rule                                    |
|-------------------------|--------------------|----------------|---------------------------------------------|
| Quality / Long Ride Day | 5-7g/kg bodyweight | 1.8-2.2g/kg    | Fuel the work. Never restrict on hard days. |
| Easy Ride Day           | 3-5g/kg bodyweight | 1.8-2.2g/kg    | Slightly lower carbs, same protein.         |
| Rest Day                | 2-3g/kg bodyweight | 1.8-2.2g/kg    | Protein stays constant. Carbs taper.        |

## Meal Timing Template

| Meal        | Timing                  | What to Include                          |
|-------------|-------------------------|------------------------------------------|
| Breakfast   | Within 60 min of waking | 30g protein + complex carbs + fruit      |
| Pre-Ride    | 60-90 min before        | Easy carbs -- toast, banana, oats        |
| During Ride | From 45 min in          | Match carbs/hr to session type           |
| Post-Ride   | Within 60 min           | 30g protein + carbs                      |
| Pre-Bed     | 30 min before sleep     | Casein protein (yoghurt, cottage cheese) |
