

HRV Interpretation Quick Guide

Week 5 -- What HRV Tells You | The Roadman Method

HRV measures variation between heartbeats. Higher = well-recovered. It is a readiness metric, not a fitness metric.

How to Measure Properly

- ☐ Same time every morning
- ☐ Same position
- ☐ Same device
- ☐ Before coffee, before standing
- ☐ At least 60 seconds

What to Look For

Signal	Meaning	Action
7-day avg stable/rising	Good recovery	Train as planned
7-day avg dropping	Fatigue building	Consider dropping volume
Sharp single-day drop	Poor sleep, stress, illness	Modify today's session
3+ days below baseline	Overreaching	Unplanned easy day or recovery block
