

Low-Cadence Torque Interval Cards

Week 9 -- Climb + Flat | The Roadman Method

"The coaches knew these protocols were wrong. So they kept prescribing these sessions anyway and waited for the science to catch up."

-- Anthony Walsh -- Roadman Cycling Podcast

From John Wakefield (Bora-Hansgrohe). The 2024 Habis study confirmed: low-cadence group improved VO2max by 8.7% vs 4.6%.

Session 1: Climb Torque

Element	Detail
Terrain	Climb, 4-7% gradient
Reps	4 x 4 minutes
Cadence	40-60 RPM
RPE	7/10
Recovery	4 min easy spinning
Warm-up	15-20 min progressive

Session 2: Flat Torque

Element	Detail
Terrain	Flat or false flat
Reps	3 x 8 minutes
Cadence	50-65 RPM
RPE	7/10
Recovery	5 min easy spinning
